SOLAR POWER USA GROWS TO SERVE DISTRIBUTION CENTERS

New Business Development Executive to Focus on Partners & Customers

Dallas, TX, March 17, 2008: Solar Power USA announced today that Michael Weinnig has joined the company as Vice President of Business Development. He will focus on developing partnerships with systems integrators, build the sales and marketing programs, and managing customer relationships.

“Mike brings a unique set of experience and expertise from corporate to entrepreneurial to Solar Power USA that will help us grow our business in the distribution center industry”, said Dan Seago, president of Solar Power USA and North American Material Handling.

With energy costs rising to record levels and the trend for more of the same, finding ways to reduce and stabilize electricity costs while reducing their carbon footprint are essential to distribution centers. Solar Power USA starts with a feasibility analysis to determine the appropriateness of a solar system for the facility or facilities based upon location, incentives and the overall scope of the project. Solar Power USA and its partners then project manage the design, processing of the performance-based incentives, and installation to meet the customer’s objectives.

The trend toward solar is underway. Tesco and Staples are recent examples of companies that have implemented solar energy systems on their distribution centers to complement their traditional electricity supply and reduce their carbon footprints.

Solar Power USA helps distribution centers reduce their electricity costs while making those costs more predictable and stable over time, as well as reducing their carbon footprint. As a subsidiary of North American Material Handling, Solar Power USA and its partners apply their expertise to the design, financing, project management, and installation of commercial scale solar energy systems specifically for the distribution center market.
