NEW RELEASE: FOR IMMEDIATE RELEASE

RE: SOLAR POWER USA

NORTH AMERICAN MATERIAL HANDLING, LLC Dallas, Texas is pleased to announce that it's subsidiary **SOLAR POWER USA Dallas, Texas** has signed an agreement with **1 STAR ENERGY**, one of North America's leading providers of industrial/commercial solar electrical systems to become its partner for warehouse distribution projects. **1 STAR ENERGY and SOLAR POWER USA** with offices in **Texas, California, Florida, Indiana, Puerto Rico and the Dominican Republic are poised to take advantage of the rapidly growing need for PV solar systems for industrial distribution centers.** This team effort makes **Solar Power USA** the front-runner in the region for large commercial and industrial solar integration. With solar tax credits and incentives already in place in many states within the United States, this agreement will allow **Solar Power USA** to work with any Texas based company's warehouse operation world wide. **Experience, Honesty and Reputation** are what make the sun shine on this team. With over \$ 30 million in sales and 5 MW of Solar Electrical Systems Integrated in the last three years **Solar Power USA** and **1 Star Energy** combine to focus on reducing their client's **Carbon Footprint** through the use of Photovoltaic installations on Schools, Medical Facilities, Manufacturing Plants, Warehouses, Gas Stations, and Industrial Parks.

"The combination of vertically integrating our knowledge of the warehouse distribution arena and our existing customer base lead us to an easy decision that this was the right area for us to expand into" says **Dan Seago CEO of NAMH, LLC.** He further adds "We believe that solar energy is the backbone of renewable energy and the future of either off grid or net metering. "We are in the beginning to what we view as the future to maximizing the returns for any warehouse operation". **"SOLAR POWER USA** is excited to have the opportunity to work with **1 Star Energy** and use their talents to expand our vision". "Our customers know the value that we have brought to them over the years from dealing with **NORTH AMERICAN MATERIAL HANDLING** and we plan on doing the same through **SOLAR POWER USA**".

Solar Power USA can help you understand that available Federal Tax Credits, State Tax Credits, Rebates, Performance Based Incentives, MACRS Depreciation, Energy Savings and Renewable Energy Credits all combine to create a great Return On Investment. Solar energy is the way that companies are meeting their **Renewable Portfolio Standards** and becoming greener. These incentives make your choice to become greener, politically, financially, socially, technically and most of all **environmentally correct.**

Solar Power USA knows that this energy is created through the use of Photovoltaic modules that receive light from the sun and turn that light into electrical energy. The energy produced is in **DC** and is then converted to **AC** by use of a Photovoltaic Inverter that allows the electrical energy to flow back onto the grid. As the energy is produced it flows through a Net Meter that allows the Utility to track the production and credit the customer for the amount of energy that is produced. This is the miracle of turning sunshine into electricity for **Net Metering**.

Solar Power USA brings to its clients an experience that creates **Turn Key Solar Electrical Systems** that not only produce energy but also they are esthetically pleasing. The systems have little or no maintenance and the Solar Modules bring a **warranty of 25 years**. Access to products from solar manufacturers such as Uni- Solar, Evergreen, GE, Sharp, RWE Schott, ET Solar, Isofoton, Sat Con Systems, SMA America, Solectrica Renewables, Uni-Rack, and Power Fab allow **Solar Power USA** to integrate systems that give their clients a choice and a variety of Solar Products that will create energy for years to come.

Solar Power USA will provide the **Energy Audit, System Design, Electrical and Structural Engineering, Technically Advanced Materials, Experienced Construction, Installation and Monitoring of the solar electrical system once it is installed.**

Solar Power USA agrees that there is still an **Energy Crisis** due the high cost of electricity and increasing demand. **Solar Power USA** can audit your facility and create the opportunity to produce the power you want and need, protecting you from further energy cost increases and eventually creating a stream of energy saving that is **free!**

For more information please contact **Solar Power USA** at 972-818-4370 or email Dan Seago at dseago@solarpower-usa.com. Or David Rose 1 Star Energy dave@1starenergy.com
